

Unassessed exercises / problems:

(1)

- (a) Discuss what the differences are between objective and subjective data
 - (b) Discuss what the differences are between qualitative and quantitative data
 - (c) State an example of qualitative objective data
 - (d) State an example of quantitative subjective data
-

(2)

You have developed a visualisation toolkit to assist with the teaching of a data visualisation course at the university. You are planning an experiment to investigate, to what extent, the toolkit you have developed helps undergraduate students taking the course to solve coursework exercises.

- (a) State whether you would use a between or within subjects design during this experiment, justify your answer.
 - (b) Identify one quantitative dependent variable for this experiment. Identify one qualitative dependent variable for this experiment.
 - (c) Design a close-ended question you could use to capture the qualitative variable you identified in (b)
 - (d) Design a open-ended question you could use to capture the qualitative variable you identified in (b)
 - (e) Discuss how you might analyse the data collected by the questions you designed in parts (c) and (d) respectively
-

(3)

- (a) Discuss what is meant by “informed consent” in the context of running a study in computing science (e.g. a human-computer interaction study involving human participants)
- (b) Describe two possible ethical issues raised by a lecturer running an experiment using students he is teaching as part of a mandatory undergraduate course
